`

HINDUSTAN
INSTITUTE OF TECHNOLOGY & SCIENCE
(DEEMED TO BE UNIVERSITY)

DEPARTMENT OF ELECTRICAL AND ELECTRONICS ENGINEERING

CURRICULUM AND SYLLABUS

Under CBCS

(Applicable for Students admitted from Academic Year 2018-19)

M. Tech. Power Electronics and Drives

DEPARTMENT OF ELECTRICAL AND ELECTRONICS ENGINEERING

SCHOOL OF ELECTRICAL SCIENCES

HINDUSTAN INSTITUTE OF TECHNOLOGY & SCIENCE
VISION AND MISSION

VISION

To make every man a success and no man a failure.

MISSION

To provide every individual with a conducive environment suitable to achieve his / her career goals, with a strong emphasis on personality development, and to offer the academically inclined the resources to gain quality education in all spheres of engineering, applied sciences and management, without compromising the quality and code of ethics to each student of the Institution.

DEPARTMENT OF ELECTRICAL AND ELECTRONICS ENGINEERING
VISION AND MISSION

VISION

To educate the students in the recent developments of emerging fields in Electrical and Electronics Engineering, to encourage research activities, innovative techniques and to develop managerial abilities so as to make them excel globally

MISSION

- To enable the students to function as accomplished professionals in Electrical Engineering field with due emphasis on personality development and communication skills
- Students should develop the capacity to absorb new techniques and innovative ideas in modern technological environment.

M. Tech. Power Electronics and Drives

PROGRAMME EDUCATIONAL OBJECTIVES (PEO)

The program is expected to enable the students to

PEO I Design and develop innovative products and services in the field of Power Electronics & Drives

PEO II keeps abreast with the latest technology and toolset.

PEO III Communicate effectively to propagate ideas and promote teamwork

PEO IV Attain intellectual leadership skills to cater to the changing needs of power industry, academia, society and environment

PROGRAM OUTCOMES (ALIGNED WITH GRADUATE ATTRIBUTES) (PO)

At the end of this program, graduates will be able to

PO1: An ability to apply knowledge of fundamentals of mathematics, science, and engineering.

PO2: An ability to identify, formulate and solve Electrical and Electronics Engineering problems.

PO3: An ability to understand and correctly interpret the impact of engineering solutions in a social/global context.

PO4: An ability to use research approaches for problem analysis and design.

PO5: An ability to skillfully use modern engineering tools and techniques necessary for engineering design, analysis and applications.

PO6: Ability to apply contextual knowledge relevant to professional engineering practices.

PO7: Understand the need for sustainable development and impact of professional engineering solutions in societal and environmental context.

PO8: Understanding of professional and ethical responsibility.

PO9: An ability to function and/or develop leadership in multi-disciplinary teams.

PO10: Ability to communicate effectively.

PO11: Ability to apply engineering and management principles to manage projects.

PO12: An ability to engage in life-long learning to follow developments in Electrical and Electronics Engineering.

PROGRAM SPECIFIC OUTCOMES (PSO)

PSO1: An ability to design and develop environmental friendly electrical Products

PSO2: To introduce application of electronics devices for conversion, control and automation

PSO3: Apply appropriate techniques and modern Engineering hardware and software tools inpower systems to engage in life- long learning and to successfully adapt in multi-disciplinary environments.

PSO4: Understand the impact of Professional Engineering solutions in societal and environmentalcontext, commit to professional ethics and communicate effectively.

SEMESTER – I

COURSE TITLE	ADVANCED MATHEMATICS FOR ELECTRICAL ENGINEERS			CREDITS	3
Course Code	MAA3705	Course Category	PC	L-T-P-S	3- 0- 0- 1
CIA	50%			ESE	50%
LEARNING LEVEL	BTL-3				

CO	COURSE OUTCOMES	PO
1	Gettingideaaboutbasicfundamentalsofprobability	1,2,4
2	Gettingideaaboutoptimizationtechniques	1,2,5
3	Gettingideaaboutdifferentialcalculus	1,2,12

Prerequisites : Nil

MODULE 1 – ADVANCEDMATRIXTHEORY(9L)

Matrixnorms–Jordancanonicalform–Generalizedeigenvectors–Singularvalue decomposition – Pseudo inverse – Least square approximations – QR algorithm

MODULE 2 – NUMERICAL SOLUTION OFALGEBRAICEQUATIONS(9L)

Solutions of large systems of equations using Gauss Elimination method; principle behind sparsity and optimal ordering; relevance of the solution technique for engineering applications.

MODULE 3 – NUMERICAL SOLUTION OF ORDINARYDIFFERENTIALEQUATIONS (9L)

Single and multi – step methods – explicit and implicit methods – advantages of implicit methods – solution of differential algebraic methods encountered in power engineering.

MODULE 4 – LINEARPROGRAMMING (9L)

Basic concepts – Graphical and Simplex methods –Transportation problem – Assignment problem.

MODULE 5 – DYNAMICPROGRAMMING(9L)

Elements of the dynamic programming model – optimality principle – Examples of dynamic programming models and their solutions.

COURSE TITLE	POWER CONVERTERS			CREDITS	3
COURSE CODE	EEA3701	COURSE CATEGORY	PC	L-T-P-S	3- 0- 0- 1
CIA	50%			ESE	50%
LEARNING LEVEL	BTL- 4				

CO	COURSE OUTCOMES	PO
1	To understand the working of commonly used AC-DC power Converters.	1,4,5
2	To analyze of power semiconductor switched circuits with different loads	1,5
3	To analyze and design various DC-DC power converter systems.	1,5,,12
4	Various Inverters will be analyzed.	1, 9
5	AC-AC Converter will be analysed	1,12

Prerequisites : Power Electronics

MODULE 1 – AC TO DC CONVERTERS (9L)

Single-Phase and Three-Phase AC to DC converters-half controlled configurations- operating domains of three phase full converters and semi-converters – Reactive power considerations.

Suggested Reading: Comparison of different converters

Applications: Charging Circuits

MODULE 2 – POWER SEMICONDUCTOR SWITCHED CIRCUITS (9L)

Analysis of power semiconductor switched circuits with R, L, RL, RC loads, d.c. motor load, battery charging circuit.

Suggested Reading: Different semiconductor devices can be studied

Applications: AC-DC Converter, DC-DC Converter, DC-AC Converter

MODULE 3 – DC TO DC CONVERTERS(9L)

Analysis and design of DC to DC converters- Control of DC-DC converters, Buck converters, Boost converters, Buck-Boost converters, Cuk converters

Suggested Reading: Comparison of different converters

Applications: Renewable Energy Conversion

MODULE 4 – INVERTERS (9L)

Single phase and Three phase inverters, Voltage source and Current source inverters, Voltage control and harmonic minimization in inverters.

Applications: Domestic and Commercialapplications

MODULE 5 – AC TO AC POWER CONVERTER (9L)

AC to AC power conversion using voltage regulators, choppers and cyclo-converters, consideration of harmonics, introduction to Matrix converters.

LAB / MINI PROJECT/FIELD WORK

Students should do the hardware of any one converter circuit and to demonstrate the same

COURSE CODE	**EEA3702**	**COURSE CATEGORY**	**PC**	**L-T-P-S**	**3- 0- 0- 1**
CIA	**50%**			**ESE**	**50%**
LEARNING LEVEL	**BTL- 3**				

CO	**COURSE OUTCOMES**	**PO**
1	Understand the concepts, basic components and its contribution in designing of SMPC	1,2,3
2	Ability to analyze and design switched mode power converters	1,2,3
3	To gain mathematical modelling of steady-state and dynamic operation of efficient switched- mode power conversion techniques	1,2,3,5
4	Developing the knowledge on soft switching and resonant converters	1,2,3
5	Analysis and Design of Control Loops around switched-mode power converters using averaging small-signal dynamic models and classical control theory.	1,2,5,12

Prerequisites : Power Electronics and Control Theory

MODULE 1 – INTRODUCTIONTO SMPC COMPONENTS (9L)

Introduction, Reactive Elements in Power Electronic Systems, Design of inductor, Design of transformer, Capacitors for power electronic applications, Input filter design

Suggested Reading: https://nptel.ac.in/courses/108108036/

MODULE 2 –BASIC MODELLING OF SMPC (9L)

Basic concepts of Switched Mode power converters, DC-DC converters Characteristics, constituent elements,operating principles. Dynamic Modelling of second order switched Mode power converters

Suggested Reading: https://nptel.ac.in/courses/108108036/

MODULE 3 – SMPC CONTROL (9L)

Steady state analysis, stress and sizing of elements, control methods, duty ratio, current programmed, frequency programmed and sliding mode control, Dynamic control analysis and frequency domain analysis.

Suggested Reading: https://nptel.ac.in/courses/108108036/
MODULE 4 –SOFT SWITCHONG AND RESONANT CONVERTERS (9L)
Soft-switching DC - DC Converters: zero-voltage-switching converters, zero-current- switching converters, Classification of resonant converters, Basic resonant circuit concepts, Load resonant converters, Resonant switch converters.
Suggested Reading: https://nptel.ac.in/courses/108108036/
MODULE 5 – LINEAR AND NON LINEAR ANALYSIS (9L)
Analysis of converter transfer functions, Design of feedback compensators, unity power factor rectifiers, Resistor emulation principle and applications to rectifiers. Linear and nonlinear phenomena in switched mode power converters, Bifurcation and Chaos.
Suggested Reading: https://nptel.ac.in/courses/108108036/

COURSE TITLE	**MODELLING AND ANALYSIS OF ELECTRICAL MACHINES**			**CREDITS**	**3**
COURSE CODE	**EEA3703**	**COURSE CATEGORY**	**DE**	**L-T-P-S**	**3- 0- 0- 1**
CIA	**50%**			**ESE**	**50%**
LEARNING LEVEL	**BTL-4**				

CO	**COURSE OUTCOMES**	**PO**
1	To understand the principle of electromagnetic energy conversion.	1,2,3
2	To understand the basic concepts of rotating machines and to derive the torque and voltage equation for DC motor.	1,2,3
3	To represent the dynamic model of three phase induction motor in arbitrarily rotating reference frame.	1,2,3
4	To analyze the dynamic performance of two phase asymmetrical induction machine and single phase induction machine.	1,2,3,5
5	To analyze the dynamic performance of permanent magnet synchronous motor and switched reluctance motor.	1,2,3,12

Prerequisites : Electromagnetic field theory, Vector algebra and fundamentals of all electrical rotating machines
MODULE 1-ELECTROMECHANICAL ENERGY CONVERSION (9L)
Principles of Electromagnetic Energy Conversion, General expression of stored magnetic energy, co-energy and force/torque, example using single and doubly excited system.
Suggested Reading: Modelling and simulation for self-excited doubly salient retarder system using

MATLAB.
Applications: Electrostatic actuators, dielectric actuators

MODULE 2-BASIC PRINCIPLE OF DC MACHINES (9L)

Basic Concepts of Rotating Machines-Calculation of air gap mmf and per phase machine inductance using physical machine data; Voltage and torque equation of dc machine.
Suggested Reading: Sensorless speed control of DC motor using MATLAB
Applications: Space operated vehicles, electric aircraft.

MODULE 3-MODELING OF AC MACHINES (9L)

Three phase symmetrical induction machine and salient pole synchronous machines in phase variable form; Application of reference frame theory to three phase symmetrical induction and synchronous machines, dynamic direct and quadrature axis model in arbitrarily rotating reference frames.
Suggested Reading: Steady-state modelling and analysis of synchronous motor using MATLAB.
Applications: Phonograph turntables, Constant speed constant load drives.

MODULE 4-DYNAMIC ANALYSIS OF AC MACHINES (9L)

Determination of Synchronous Machine Dynamic Equivalent Circuit Parameters, Analysis and dynamic modeling of two phase asymmetrical induction machine and single phase induction machine.
Suggested Reading: Field Oriented Control of Induction Motors using Symmetrical Optimum Method
Applications: Hybrid electric vehicles, linear actuators.

MODULE 5-DYNAMIC ANALYSIS OF SPECIAL MACHINES (9L)

Special Machines - Permanent magnet synchronous machine: Surface permanent magnet (square and sinusoidal back emf type) and interior permanent magnet machines. Construction and operating principle, dynamic modeling and self-controlled operation; Analysis of Switch Reluctance Motors.
Suggested Reading: Modelling and Simulation of Switched Reluctance Motor using MATLAB
Applications: Hybrid electric vehicles, power generation from Ocean Waves by Engine for Producing Energy from Sea Waves (EPEW).

LAB / MINI PROJECT/FIELD WORK

Vector Control of Permanent Magnet Synchronous Motor using MATLAB

COURSE CODE	**EEA3704**	**COURSE CATEGORY**	**PC**	**L-T-P-S**	**3- 0- 0- 1**
CIA	**50%**			**ESE**	**50%**
LEARNING LEVEL	**BTL-5**				

CO	**COURSE OUTCOMES**	**PO**
1	To understand the working of various Power electronic circuits and components used in industrial applications	1,2,3
2	To analyze various analog controllers and signal conditioning circuits.	1,2,3
3	To design control circuits for UPS and other industrial applications.	1,2,3
4	To gain knowledge on opto-electronics devices and its control in industrial applications	1,2,3,12
5	To get insight knowledge on stepper motor and servo motors for industrial control	1,2,3,12

Prerequisites : Analog, digital and Power electronic circuits.

MODULE 1 – SWITCHED REGULATOR AND UPS (9L)

Review of switching regulators and switch mode power supplies, Uninterrupted power supplies-offline and on-line topologies-Analysis of UPS topologies, solid state circuit breakers, solid-state tap changing of transformer.

Suggested Reading: https://nptel.ac.in/downloads/108105063/

MODULE 2 – ANALYSIS OF CONTROLLERS AND SENSORS (9L)

Analog Controllers - Proportional controllers, Proportional – Integral controllers, PID controllers, derivative overrun, integral windup, cascaded control, Feed forward control, Digital control schemes, control algorithms, programmable logic controllers - sensors for high voltage and current applications

Suggested Reading: https://nptel.ac.in/downloads/108105063/

MODULE 3 – SIGNAL CONDITIONERS (9L)

Signal conditioners-Instrumentation amplifiers – voltage to current, current to voltage, voltage to frequency, frequency to voltage converters; Isolation circuits – cabling; magnetic and electro static shielding and grounding

Suggested Reading: https://nptel.ac.in/downloads/108105063/

MODULE 4 –PHOTO ELECTRIC DEVICES (9L)

Opto-Electronic devices and control , electronic circuits for photo-electric switches-output signals for photo-electric controls; Applications of opto-isolation, interrupter modules and photo sensors; Fibre-optics; Bar code equipment, application of barcode in industry

Suggested Reading: https://nptel.ac.in/downloads/108105063/

MODULE 5 –STEPPER AND SERVO CONTROL(9L)	
Stepper motors – types, operation, control and applications; servo motors- types, operation, control and applications – servo motor controllers – servo amplifiers – linear motor applications-selection of servomotor Suggested Reading: **https://nptel.ac.in/downloads/108105063/**

COURSE TITLE	RESEARCH METHODOLOGY & IPR				CREDITS	2
COURSE CODE	ZZZ3715	COURSE CATEGORY	PC	L-T-P-S	2-0-0-0	
CIA	50%			ESE	50%	
LEARNING LEVEL	BTL-5					

CO	COURSE OUTCOMES	PO
1.	Understand research problem formulation.	1,2,3
2.	Understand that today's world is controlled by Computer, Information Technology, but tomorrow world will be ruled by ideas, concept, and creativity.	1,2,3
3.	Understanding that when IPR would take such important place in growth of individuals & nation, it is needless to emphasis the need of information about Intellectual Property Right to be promoted among students in general & engineering in particular.	1,2,3,5
4.	Understand that IPR protection provides an incentive to inventors for further research work and investment in R & D, which leads to creation of new and better products, and in turn brings about, economic growth and social benefits.	1,2,3,5
5.	Analyze research related information and to follow research ethics	1,2,3,12

Prerequisites: Nil

MODULE 1 – RESEARCH PROBLEM FORMULATION (9L)
Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, Scope and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, Necessary instrumentations
MODULE 2 –RESEARCH PROPOSAL AND ETHICS (9L)
Effective literature studies approaches, analysis Plagiarism, Research ethics, Effective technical

writing, how to write report, Paper Developing a Research Proposal, Format of research proposal, a presentation and assessment by a review committee.	
MODULE 3 - DATA ANALYSIS AND INTERPRETATION (9L)	
Classification of Data, Methods of Data Collection, Sampling, Sampling techniques procedure and methods, Ethical considerations in research Data analysis, Statistical techniques and choosing an appropriate statistical technique, Hypothesis, Hypothesis testing, Data processing software (e.g. SPSS etc.), statistical inference, Interpretation of results.	
MODULE 4 - NATURE OF INTELLECTUAL PROPERTY (9L)	
Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT.	
MODULE 5 –PATENT RIGHTS AND NEW DEVELOPMENTS IN IPR (9L)	
Scope of Patent Rights. Licensing and transfer of technology. Patent information and databases. Geographical Indications. Administration of Patent System. New developments in IPR; IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.

Course Title	DESIGN AND SIMULATION OF POWER ELECTRONIC CIRCUITS LABORATORY				2
Course Code	EEA3791	Course Category	PC	L-T-P-S	0-03-0
CIA	60%		ESE	40%	
LEARNING LEVEL	BTL-4				

CO	COURSE OUTCOMES	PO
1	Construct and analyse the basic rectifier and inverter circuits	1,3,4,5
2	Construct and analyse controlled rectifier and inverter circuits	1,3,4,5,12
3	Construct and analyse AC voltage controller	1,3,4,5,12

Prerequisites: -: Basic Power Electronics

Practical: **(45)**

1. Single-phase and three-phase half-controlled rectifiers
2. Single-phase and three-phase fully-controlled rectifiers
3. Buck, Boost and Buck-Boost converters
4. Single-phase and three-phase Voltage-source inverters
5. Single-phase and three-phase Current-source inverters
6. Single-phase and three-phase AC voltage regulators

SEMESTER – II

COURSE TITLE	POWER ELECTRONIC DRIVES		CREDITS	3
COURSE CODE	EEA3705	COURSE CATEGORY	L-T-P-S	3- 0- 0- 1
CIA	50%		ESE	50%
LEARNING LEVEL	BTL- 5			

CO	COURSE OUTCOMES	PO
1	Understand and analyze the basic power electronics drive systems dc and ac motors supplied from different power converters	2,3,5
2	Understand and analyze the dc motors supplied from different power converters	2,3,5
3	Simulate and study motor characteristics with different chopper configurations	2,3,4,5
4	Analyse the different methods of controlling the speed of Induction Motor	3,4,5,12
5	Analyse the different methods of controlling the speed of Synchronous Motor	3,4,5,12

Prerequisites : Power Electronics , Solid state Drives in UG

MODULE 1 – BASIC OF POWER ELECTRONIC DRIVE SYSTEM (9L)

Basic power electronic drive system, components. Different types of loads, shaft-load coupling systems. Stability of power electronic drive.

Suggested Reading: Different methods of loading

MODULE 2 – CONVERTER FOR DRIVE SYSTEM (9L)

Conventional methods of D.C.motor speed control, single phase and three phase converter fed D.C motor drive. Power factor improvement techniques, four quadrant operation.

MODULE 3 – CHOPPERS FOR DRIVE SYSTEM (9L)
Chopper fed drives, input filter design. Braking and speed reversal of DC motor drives using choppers, multiphase choppers. PV fed DC drives. **Suggested Reading:** Choppers used for Solar PV system **Applications:** Used in Renewable energy systems
MODULE 4 – INDUCTION MOTOR SPEED CONTROL (9L)
Conventional methods of induction motor speed control. Solid state controllers for Stator voltage control, soft starting of induction motors, Rotor side speed control of wound rotor induction motors. Voltage source and Current source inverter fed induction motor drives – d-q axis modeling and vector control. **Suggested Reading:** IEEE papers in Induction motor speed control
MODULE 5 – SYNCHRONOUS MOTOR SPEED CONTROL (9L)
Speed control of synchronous motors, field oriented control, load commutated inverter drives, switched reluctance motors and permanent magnet motor drives. Introduction to design aspects of machines. **Suggested Reading:** IEEE papers in Synchronous motor speed control
LAB / MINI PROJECT/FIELD WORK
Design and implement a prototype drive system

ELECTIVES

COURSE TITLE	LINEAR AND NON-LINEAR SYSTEMS THEORY			CREDITS	3
COURSE CODE	EEA3721	COURSE CATEGORY	PC	L-T-P-S	3- 0- 0- 1
CIA	50%			ESE	50%
LEARNING LEVEL	BTL- 4				

CO	COURSE OUTCOMES	PO
1	Understand and model physical systems using state vectors	2,3,
2	Analyze the stability of linear systems.	2,3,
3	Design state feedback controllers and observers.	2,3,4,5
4	Understand and analyze non-linear systems using linear approximations.	3,4,5,12
5	Inspect the stability of non-linear systems by direct and indirect methods.	3,4,5,12

Prerequisites : control system	
MODULE 1 STATE SPACE REPRESENTATION (9L)	
Introduction to state space modeling, modelling of physical systems. Solution to vector differential equations and state transition matrix. **Suggested Reading:** Modelling of different Electrical and Mechanical systems	
MODULE 2 – CONTROLLABILITY AND OBSERVABILITY (9L)	
Stability analysis of linear systems. Controllability and Observability definitions and Kalman rank conditions. Detectability and Stabilizability, Kalman decomposition. **Suggested Reading:** Analysis of Multi input Multi output systems	
MODULE 3 – MODAL CONTROL (9L)	
State feedback controller design using pole placement. Observer design using Kalman filter algorithm. LQR and LQG controller design **Suggested Reading:** Pole placement by feedback for multi input systems	
MODULE 4 NONLINEAR SYSTEMS (9L)	
Introduction to nonlinear systems. Phase plane analysis of nonlinear system using linear approximation.Limit cycle and periodic solutions. Singular points (equilibrium points) and qualitative behavior near singular points. **Suggested Reading:** Types of nonlinearity	
MODULE 5 – STABILITY (9L)	
Stability of nonlinear systems. Lyapunov direct and indirect methods. Input-to-state stability and relative stability **Suggested Reading:** Aids to finding Lyapunov function for Nonlinear continuous time autonomous system

COURSE TITLE	ADVANCED TOPICS IN POWER ELECTRONICS			CREDITS	3
COURSE CODE	EEA3722	COURSE CATEGORY	DE	L-T-P-S	3- 0- 0- 1
CIA	50%			ESE	50%
LEARNING LEVEL	BTL-4				

CO	COURSE OUTCOMES	PO
1	Understand the principles of operation of advanced Silicon devices.	2,3,
2	Appraise various advanced converter topologies and the suitable control schemes.	2,3,
3	Recognize recent developments in design aspects of reactive elements such as the material, the structure etc and the effect on performance.	2,3,4
4	Understand nuances of advanced energy storage systems such as battery energy storage system (BESS), ultra-capacitors, etc and strategies for power management in such systems.	4,5,12
5	Distinguish between various possible solutions pertaining to thermal management and EMI/EMC problems and devise solutions for simple power electronic systems	3,4,5,12

Prerequisites: Power Electronics.

MODULE 1 – POWER SEMICONDUCTOR DEVICES (9L)

Introduction to switches - Advanced Silicon devices - Silicon HV thyristors, MCT, BRT & EST. SiC devices - diodes, thyristors, JFETs & IGBTs. Gallium nitrate devices - Diodes, MoSFETs

MODULE 2 – ADVANCED CONVERTER (9L)

Advance converter topologies for PEE - Interleaved converters, Z-Source converters, Multi level converters (Cascaded H-Bridge, Diode clamped, NPC, Flying capacitor) Multi pulse PWM current source converters, Advanced drive control schemes.

MODULE 3 – REACTIVE ELEMENTS (9L)

Advances in reactive elements - Advanced magnetic material, technology and design (Powder ferrite, Amorphous, Planar designs) Advance capacitive designs (Multilayer chip capacitors, double layers for storage, Aluminum electrolytic)

MODULE 4 – STORAGE SYSTEMS (9L)

Advance storage systems - Developments in battery systems, Ultra capacitors, Fly wheel energy storage, Hybrid storage systems for EV/HEV, Power management in hybrid systems, Energy storage in renewable.

MODULE 5 – THERMAL ENGINEERING (9L)

Thermal engineering with EMI/EMC techniques - Advanced thermal solutions (fan cooled, liquid cooled, heat pipes, hybrid techniques) EMC techniques (Conducted, Radiated emissions & Susceptibility), System design for EMC.

1	https://www.coursera.org/learn/converter-circuits
2	https://nptel.ac.in/courses/nptel_download.php?subjectid=108101038

COURSE TITLE	ENERGY STORAGE SYSTEMS			CREDITS	3
COURSE CODE	EEA3723	COURSE CATEGORY	DE	L-T-P-S	3- 0- 0- 1
CIA	50%			ESE	50%
LEARNING LEVEL	BTL- 4				

CO	COURSE OUTCOMES	PO
1	Recognize various issues related to energy market, its growth and its structural implications in India.	2,3
2	Analyze the performance of different battery storage systems.	2,3,
3	Employ different thermoelectric measurement techniques appropriately.	2,3,4
4	Interpret the applications of super capacitors for appropriate storage systems.	2,3,4,5,12
5	Understand and differentiate different types of fuel cells.	3,4,5,12

Prerequisites : Fundamental Chemistry and Material Science.

MODULE 1 – INTRODUCTION (9L)

Prospect for both traditional and renewable energy sources - detailed analysis of Indian energy market and future need through 2020 - energy, economic growth and the environment, implications of the Kyoto Protocol, and structural change in the electricity supply industry

Suggested Reading: Present and Future Energy Scenario in India

MODULE 2 – STORAGE SYSTEMS (9L)

Batteries - performance, charging and discharging, storage density, energy density, and safety issues, classical batteries - Lead Acid, Nickel-Cadmium, Zinc Manganese dioxide, and modern batteries -Zinc-Air, Nickel Hydride, Lithium Battery.

Suggested Reading : Storage Battery Maintenance and Principles

MODULE 3 – THERMOELECTRIC (9L)

Thermoelectric - electron conductor and phonon glass, classical thermoelectric materials (i) four-

proberesistivity measurement, Seebeck coefficient measurement, and thermal conductivity measurement.

Suggested Reading:

Applications:

MODULE 4 – SUPER CAPACITORS (9L)

Super capacitors - types of electrodes and some electrolytes, Electrode materials - high surface area activated carbons, metal oxide, and conducting polymers, Electrolyte - aqueous or organic, disadvantages and advantages of super capacitors - compared to battery systems, applications - transport vehicles, private vehicles, and consumer electronics - energy density, power density, price, and market.

Suggested Reading: Linden's Handbook of Batteries, Fourth Edition by by: Thomas B. Reddy

MODULE 5 – FUEL CELLS (9L)

Fuel cells - direct energy conversion - maximum intrinsic efficiency of an electrochemical converter, physical interpretation - carnot efficiency factor in electrochemical energy convertors, types of fuel cells -hydrogen oxygen cells, hydrogen air cell, alkaline fuel cell, and phosphoric fuel cell.

Suggested Reading: fuel cells and its application

2	https://ocw.tudelft.nl/courses/sustainable-hydrogen-electrical-energy-storage/

COURSE TITLE	**ELECTRIC AND HYBRID VEHICLES**			**CREDITS**	**3**
COURSE CODE	**EEA3724**	**COURSE CATEGORY**	**DE**	**L-T-P-S**	**3- 0- 0- 1**
CIA	**50%**			**ESE**	**50%**
LEARNING LEVEL	**BTL- 4**				

CO	**COURSE OUTCOMES**	**PO**
1	Understand mathematical models, performance and characteristics of hybrid and electric vehicles.	2,3,4
2	Analyze the concepts, topologies and power flow control of electric traction systems.	2,3,4
3	Appraise the configuration and control of various hybrid electric motor drives	2,3,4,5
4	Plan and design appropriate vehicle management system.	2,3,4,5,12

Prerequisites : power electronics

MODULE 1 – INTRODUCTION HYBRID AND ELECTRIC VEHICLES (9L)

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric

vehicles, impact of modern drive-trains on energy supplies. Basics of vehicle performance, vehicle power source characterization, transmission characteristics, mathematical models to describe vehicle performance.

Suggested Reading: Future prospectus of hybrid and electric vehicles

Applications: Modern hybrid vehicles

MODULE 2 – ELECTRIC TRACTION SYSTEMS(9L)

Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis. Basic concepts of electric traction, introduction to various electric drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

Suggested Reading: https://link.springer.com/chapter/10.1007/978-3-642-30281-7_2 (Railway traction system)

MODULE 3 – HYBRID ELECTRIC MOTOR DRIVES(9L)

Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Introduction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, drive system efficiency.

Suggested Reading: Modern Electric Hybrid Electric & Fuel Cell Vehicles by MehrdadEhsani (http://ceb.ac.in/knowledge-center)

MODULE 4 –ELECTRICAL MACHINES AND INTERNAL COMBUSTION ENGINE(9L)

Matching the electric machine and the internal combustion engine (ICE), Sizing the propulsion motor, sizing the power electronics, selecting the energy storage technology, Communications, supporting subsystems.

Suggested Reading: Selection of ICE and Electrical machines

MODULE 5 – VEHICLE MANAGEMENT SYSTEM(9L)

Introduction to energy management strategies used in hybrid and electric vehicle, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy strategies.

Suggested Reading: Advanced Vehicle Management System

LAB / MINI PROJECT/FIELD WORK

2	https://www.edx.org/course/hybrid-vehicles

COURSE TITLE	DISTRIBUTED GENERATION AND MICRO-GRIDS			CREDITS	3
COURSE CODE	EEA3725	COURSE CATEGORY	DE	L-T-P-S	3- 0- 0- 1
CIA	50%			ESE	50%
LEARNING LEVEL	BTL-4				

CO	COURSE OUTCOMES	PO
1	Understand the current scenario of Distributed Generation and the need to implement DG sources.	2,3,4
2	Investigate the different types of RES as DGs.	2,3,4
3	Appraise the grid integration ,interfaces and technical impacts of DGs upon transmission and distribution systems	2,3,4,5
4	Analyze the aspects of Power Quality and Reliability.	3,4,5,12
5	To understand comprehensively about different types of Storage systems.	3,4,5,12

Prerequisites : The students are preferred to have a basic knowledge in Power System Analysis and DistributionSystems

MODULE 1 – INTRODUCTION , PLACING AND SIZING THE DISTRIBUTED ENERGY RESOURCES (9L)

Need for Distributed generation, renewable sources in distributed generation, current scenario in Distributed Generation, Planning of DGs – Siting and sizing of DGs – optimal placement of DG sources in distribution systems.

Suggested Reading: Detailed study of Renewable Energy Sources

Applications: Siting and Sizing of DGs using ETAP

MODULE 2 –RENEWABLE ENERGY SOURCES (9L)

Wind Power-Photovoltaic and Thermo-solar power-Biomass Power, Fuel cells types, types of Tidal power generation schemes, mini and micro hydro power schemes.

Suggested Reading: Micro turbines for DG, bulb and tubular turbines-

MODULE 3 –GRID INTEGRATION , INTERFACES AND IMPACTS OF DGS . (9L)

Grid integration of DGs – Different types of interfaces - Inverter based DGs - Aggregation of multiple DG units. – Transmission systems, Distribution systems, De-regulation – Impact of DGs upon protective relaying

Suggested Reading: Rotating machine based interfaces

MODULE 4 – POWER QUALITY AND RELIABILITY IN DER (9L)

Voltage control techniques, Reactive power control, Harmonics, Power quality issues. Reliability of DG based systems – Steady-state and Dynamic analysis.

Suggested Reading: Various aspects of Operations

MODULE 5 –ENERGY STORAGE AND CONTROL TECHNIQUES(9L)

Energy Storage for use with Distributed Generation-Battery Storage, Capacitor Storage, ultra-capacitors and Mechanical Storage: Flywheels, Pumped and Compressed Fluids. Control Techniques for DER integration systems- Standards and codes for interconnection- future structure of grid.

Suggested Reading: Various aspects such as Market Management Retailing , Trading

and Ancillary Services	
LAB / MINI PROJECT/FIELD WORK	
Simulation in ETAP/HOMER

MOOC	
1	Micro grid, Course era .
2	Introduction to Smart Grid, NPTEL online
3	Solar Energy: Integration of Photovoltaic Systems in Microgrids ,EDX
4	Distributed Energy - Smart Grid Resources for the Future , EDX

COURSE TITLE	**ELECTRICAL SYSTEMS IN WIND ENERGY**			**CREDITS**	**3**
COURSE CODE	**EEA3726**	**COURSE CATEGORY**	**PE**	**L-T-P-S**	**3- 0- 0- 1**
CIA	**50%**			**ESE**	**50%**
LEARNING LEVEL	**BTL-4**				

CO	**COURSE OUTCOMES**	**PO**
1	Explain the operation of electrical generators used in wind energy systems	2,3,4,5,12
2	Carry out the steady-state analysis of electrical systems	2,3,4,5,12
3	Design and implement the suitable closed-loop controller for specific applications.	2,3,4,5,12

Prerequisites : Electrical machines and power electronics.

MODULE 1 – WIND ENERGY FUNDAMENTALS (9L)

Wind energy basics, wind speeds, wind characteristics and power production, betz coefficient, limits, Air foil terminology , blade element theory, blade design, number of blades,shapes,tipspeed, lift and drag ratio ,rotor dynamics, types of loads, balancing technique

MODULE 2 – GRID CONNECTED INDUCTION GENERATORS (9L)	
Principle of operation – steady-state analysis-characteristics of GCIGs- operation of GCIGs with different power electronic configurations.	
MODULE 3 – SELF EXCITED INDUCTION GENERATORS (9L)	
Process of self-excitation – steady-state equivalent circuit of SEIG and its analysis - performance equations - widening the operating speed-range of SEIGs by changing the stator winding connection with suitable solid state switching schemes - power electronic controllers used in standalone systems.	
MODULE 4 – DOUBLY FED INDUCTION GENERATOR (9L)	
Different operating modes- steady-state equivalent circuit- performance analysis- DFIG for standalone applications- operation of DFIGs with different power electronic configurations for standalone and grid connected operation	
MODULE 5 – PERMANENT MAGNET SYNCHRONOUS GENERATOR (9L)	
Operation of PMSGs- steady-state analysis- performance characteristics- operation of PMSGs with different power electronic configurations for standalone and grid-connected operation.	
LAB / MINI PROJECT/FIELD WORK	
Modeling wind turbine Generators in MATLAB

COURSE TITLE	SMART GRID TECHNOLOGIES & IOT			CREDITS	3
COURSE CODE	EEA3727	COURSE CATEGORY	DE	L-T-P-S	3- 0- 0- 1
CIA	50%			ESE	50%
LEARNING LEVEL	BTL-4				

CO	COURSE OUTCOMES	PO
1	Get acquainted with different smart devices and smart meters	2,3,4,5,12
2	Describe how modern power distribution system functions	2,3,4,5,12
3	Identify suitable communication networks for Smart Grid applications	2,3,4,5,12

Prerequisites : Fundamentals of Power Distribution System, Transmission and Distribution, Power system Operation and Control, Communication Networks

MODULE 1 – INTRODUCTION TO SMART GRID (9L)

Introduction - Evolution of Electric Grid, Smart Grid Concept - Definitions and Need for Smart Grid – Functions – Opportunities – Benefits and challenges, Difference between conventional & Smart Grid, Technology Drivers

MODULE 2 – ENERGY MANAGEMENT SYSTEM (9L)

Energy Management System (EMS) - Smart substations - Substation Automation - Feeder Automation, SCADA – Remote Terminal Unit – Intelligent Electronic Devices – Protocols, Phasor Measurement Unit – Wide area monitoring protection and control, Smart integration of energy resources – Renewable, intermittent power sources – Energy Storage.

MODULE 3 – DISTRIBUTION MANAGEMENT SYSTEM (9L)

Distribution Management System (DMS) – Volt / VAR control – Fault Detection, Isolation and Service Restoration, Network Reconfiguration, Outage management System, Customer Information System, Geographical Information System, Effect of Plug in Hybrid Electric Vehicles

MODULE 4 – SMART METERS (9L)

Introduction to Smart Meters – Advanced Metering infrastructure (AMI), AMI protocols – Standards and initiatives, Demand side management and demand response programs, Demand pricing and Time of Use, Real Time Pricing, Peak Time Pricing.

MODULE 5 – COMMUNICATION NETWORKS & IOT (9L)

Elements of communication and networking – architectures, standards, PLC, Zigbee, GSM, BPL, Local Area Network (LAN) - House Area Network (HAN) - Wide Area Network (WAN) - Broadband over Power line (BPL) - IP based Protocols - Basics of Web Service and CLOUD Computing, Cyber Security for Smart Grid.

COURSE CODE	**EEA3728**	**COURSE CATEGORY**	**DE**	**L-T-P-S**	**3- 0- 0- 1**
CIA	**50%**			**ESE**	**50%**
LEARNING LEVEL	**BTL-4**				

CO	**COURSE OUTCOMES**	**PO**
1	To develop algorithm and software models for power electronics and drives applications	2,3,4,5,12
2	To analyze the transient and steady performance of the designed models.	2,3,4,5,12
3	To choose suitable devices or models for appropriate applications	2,3,4,5,12
4	To choose suitable devices or models based on the required applications	2,3,4,5,12
5	Will be able to model a control circuitary based on the electric machine in use.	2,3,4,5,12

Prerequisites :

MODULE 1 - ANALYSIS OF DC CIRCUITS(L9)

Review of numerical methods. Application of numerical methods to solve transients in D.C. Switched R,L, R-L, R-C and R-L-C circuits. Extension to AC circuits.

Suggested Reading: Resonance in power converters circuits- https://ieeexplore.ieee.org/xpl/mostRecentIssue.jsp?punumber=6374374

Applications: To find resonance and transients

MODULE 2 - SIMULATION OF SEMICONDUCTOR SWITCHES AND DC CIRCUITS(L9)

Modeling of diode in simulation. Diode with R, R-L, R-C and R-L-C load with ac supply. Modeling of SCR,TRIAC, IGBT and Power Transistors in simulation. Application of numerical methods to R, L, C circuits with power electronic switches. Simulation of gate/base drive circuits, simulation of snubber circuits.

Suggested Reading: Operation of all the power switches

Applications: Renewable energy systems, Speed control of Drives

MODULE 3 - ELECTRICAL MACHINE MODELLING AND SIMULATION (L9)

State space modeling and simulation of linear systems. Introduction to electrical machine modeling: induction, DC, and synchronous machines, simulation of basic electric drives, stability aspects.

Suggested Reading: The calculation and design of Electrical Apparatus

Applications: In designing electrical machines

MODULE 4 -SIMULATION OF RECTIFIERS AND CHOPPERS (L9)

Simulation of single phase and three phase uncontrolled and controlled (SCR) rectifiers, converters with self-commutated devices- simulation of power factor correction schemes, Simulation of converter fed dc motor drives ,Simulation of thyristor choppers with voltage, current and load

commutation schemes, Simulation of chopper fed dc motor. **Suggested Reading: Calculation for passive components used for rectifiers and choppers** **Applications: Power System and Power electronics for RES**
MODULE 5 -SIMULATION OF INVERTERS AND ELECTRIC DRIVESMODULE(L9)
Simulation of single and three phase inverters with thyristors and self-commutated devices, Space vector representation, pulse-width modulation methods for voltage control, waveform control. Simulation of inverter fed induction motor drives. **Suggested Reading: Multi level inverter** **Applications: Renewable Energy Systems, Electric Drives**
LAB / MINI PROJECT/FIELD WORK
Design of Wind energy conversion system/Standalone PV system / Speed control of electric drives

COURSE TITLE	**POWER QUALITY**			**CREDITS**	**3**
COURSE CODE	**EEA3729**	**COURSE CATEGORY**	**DE**	**L-T-P-S**	**3- 0- 0- 1**
CIA	**50%**			**ESE**	**50%**
LEARNING LEVEL	**BTL-4**				

CO	**COURSE OUTCOMES**	**PO**
1	To understand different types of power quality problems with their source of generation.	2,3,4,5,12
2	To learn and characterize various power quality problems	2,3,4,5,12
3	To identify different mitigation techniques	2,3,4,5,12
4	To design active & passive filters for harmonic elimination.	2,3,4,5,12
5	To understand power quality monitoring and classification techniques	2,3,4,5,12

Prerequisites : Power Systems, Signals and Systems

MODULE 1-INTRODUCTION TO POWER QUALITY(9L)	
Electric power quality phenomena - IEC and IEEE definitions - power quality disturbances - voltage fluctuations- transients- unbalance- waveform distortion- power frequency variations. **Suggested Reading:** Computer Business Equipment Manufacturers Associations (CBEMA) Curve	
MODULE 2-VOLTAGE SAGS AND INTERRUPTIONS(9L)	
Voltage variations - Voltage sags and short interruptions – flicker-longer duration variations- sources – range and impact on sensitive circuits-standards – solutions and mitigations – equipment and techniques. **Suggested Reading:** Voltage Sag Due to Induction Motor Starting	
MODULE 3-TRANSIENTS (9L)	
Transients – origin and classifications – capacitor switching transient – lightning-load switching – impact on users – protection – mitigation. **Suggested Reading:** Introduction to computer analysis tools for transients **Applications:** Protection of Transformers and Cables	
MODULE 4-HARMONICS (9L)	
Harmonics – sources – definitions & standards – impacts - calculation and simulation –harmonic power flow -mitigation and control techniques – filtering – passive and active. **Suggested Reading:** Modelling and analysis of power quality problems by mathematical simulation tools **Applications:** Harmonic / Spectrum Analyzer	
MODULE 5-POWER QUALITY CONDITIONERS (9L)	
Power Quality conditioners – shunt and series compensators - DSTATCOM - Dynamic voltage restorer – unified power quality conditioners - case studies. **Suggested Reading:** Modelling and analysis of unified power flow controller. **Applications:** Expert Systems for Power Quality Monitoring	
LAB / MINI PROJECT/FIELD WORK	
SVC based Reactive Power Optimization using MATLAB

COURSE TITLE	**ARTIFICIAL INTELLIGENCE IN ELECTRICAL DRIVES**			**CREDITS**	**3**
COURSE CODE	**EEA3730**	**COURSE CATEGORY**	**DE**	**L-T-P-S**	**3- 0- 0- 1**
CIA	**50%**			**ESE**	**50%**
LEARNING LEVEL	**BTL- 4**				

CO	**COURSE OUTCOMES**	**PO**
1.	Able to understand fundamentals of various AI based techniques	2,3,4,5,12
2.	Able to analyse various AI techniques presented for electrical machines and drives	2,3,4,5,12
3.	Able to analyse various evolution techniques	3,4,5,12

Prerequisites : power electronics

MODULE 1 – ARTIFICIAL INTELLIGENT BASED SYSTEMS (9L)

Natural language system – perception system for vision speech and touch - expert or knowledge based system – knowledge acquisition – knowledge of representation – inference strategy – expert controller.

Suggested Reading: Artificial Intelligence basics

MODULE 2 – ARTIFICIAL INTELLIGENCE(9L)

Definition, problem solving methods, searching techniques, knowledge representation, reasoning methods, predicate logic, predicate calculus, multivalue logic.

Suggested Reading: Paradigms of Artificial Intelligence Programming

Applications: Renewable Energy

MODULE 3 – FUZZY LOGIC(9L)

Concepts, fuzzy relations, membership functions, matrix representation, de-fuzzification methods **Suggested Reading: fuzzy logic with engineering application**

Applications: Renewable Energy

MODULE 4 – ARTIFICIAL NEURAL NETWORK (9L)

Introduction, multi-layer feed forward networks, back propagation algorithms, radial basis function and recurrent networks.

Applications: Domestic and Commercialapplications

MODULE 5 – EVOLUTIONARY TECHNIQUES(9L)	
Introduction and concepts of genetic algorithms and evolutionary programming Hybrid Systems: Introduction and Algorithms for Neuro-Fuzzy, Neuro-Genetic, Genetic-Fuzzy systems. **Suggested Reading: Modern evolutionary techniques** **Applications:** Renewable Energy Conversion	
LAB / MINI PROJECT/FIELD WORK

COURSE TITLE	RENEWABLE POWER GENERATION TECHNOLOGIES			CREDITS	3
COURSE CODE	EEA3731	COURSE CATEGORY	DE	L-T-P-S	3- 0- 0- 1
CIA	50%			ESE	50%
LEARNING LEVEL	BTL-5				

CO	COURSE OUTCOMES	PO
1	Appraise the need and possibility of extracting solar energy and converting into electrical energy using PV cell.	2,3,4,5,12
2	Design and analyze stand-alone and grid connected PV system.	2,3,4,5,12
3	Describe the dynamics of wind turbine and electrical generator	2,3,4,5,12
4	Select and design suitable configuration of the wind energy conversion system based on application.	2,3,4,5,12
5	Suggest, design and analyze hybrid energy systems.	2,3,4,5,12

Prerequisites : Basic Electronics and Machines, Power Electronics

MODULE 1 – SOLAR ENERGY (9L)
Definition, Energy available from Sun, Solar radiation data,solar energy conversion into heat, Flat plate and Concentrating collectors, Principle of natural and forced convection. power generation. PV Systems - Design of PV systems-Standalone system with DC and AC loads with and without battery storage-Grid connected PV systems-Maximum Power Point Tracking

MODULE 2 – WIND ENERGY	**(9L)**
Wind energy – energy in the wind – aerodynamics - rotor types – forces developed by blades - Aerodynamic models – braking systems – tower - control and monitoring system - design considerations power curve - power speed characteristics-choice of electrical generators	
MODULE 3 – WIND TURBINE GENERATOR SYSTEMS	**(9L)**
Fixed speed induction generator-performance analysis- semi variable speed induction generator-variable speed induction generators with full and partial rated power converter topologies -isolated systems-self excited induction generator- permanent magnet alternator - performance analysis	
MODULE 4 – NATURE OF GEOTHERMAL RESOURCES	**(9L)**
Definition and classification ofresources, Utilization for electricity generation and direct heating, Wellhead power generating units. Basic features: Atmospheric exhaust and condensing, Exhaust types of conventional steam turbines. Pyrolysis of Biomass to produce solid, liquid and gaseous fuels. Biomass gasification, Constructional details of gasifier, Usage of biogas for chullas, various types of chullas for rural energy needs.	
MODULE 5 – HYBRID ENERGY SYSTEMS	**(9L)**
wind-diesel system, wind - PV system ,micro hydro-PV system ,biomass - PV-diesel system, geothermal-tidal and OTEC systems	
LAB / MINI PROJECT/FIELD WORK	
Mini Project: Prototype modelling of Renewable power Generation

COURSE TITLE	ENERGY AUDITING AND MANAGEMENT			CREDITS	3
COURSE CODE	EEA3732	COURSE CATEGORY	DE	L-T-P-S	3- 0- 0- 1
CIA	50%			ESE	50%
LEARNING LEVEL	BTL- 4				

CO	COURSE OUTCOMES	PO
1	Assess the energy management on various electrical equipment and metering	2,3,4,5,12
2	Adopt Conservation methods in various systems.	2,3,4,5,12
3	Learn various technically proven ways to conserve Energy and then prioritize them based on the cost benefit analysis	2,3,4,5,12
4	Illustrate the concept of lighting systems and cogeneration.	2,3,4,5,12
5	Apply Tools for energy audit and recommend measures for energy conservation	2,3,4,5,12

Prerequisites : Nil

MODULE 1 INTRODUCTION(9L)

Need for energy management - energy basics- designing and starting an energy management program – energy accounting -energy monitoring, targeting and reporting-energy audit process.

Suggested Reading: Study of energy audit report

MODULE 2 ENERGY COST AND LOAD MANAGEMENT(9L)

Important concepts in an economic analysis - Economic models-Time value of money- Utility rate structures- cost of electricity-Loss evaluation- Load management: Demand control techniques-Utility monitoring and control system-HVAC and energy management-Economic justification.

Suggested Reading: Analysis of different economic models

MODULE 3 ENERGY MANAGEMENT FOR MOTORS, SYSTEMS, AND ELECTRICAL EQUIPMENT (L9)

Energy efficient motors , factors affecting efficiency, loss distribution , constructional details , characteristics - variable speed , variable duty cycle systems, RMS hp- voltage variation-voltage unbalance- over motoring- motor energy audit. Transformer Loading/Efficiency analysis, Feeder/cable loss evaluation, case study. Reactive Power management-Capacitor Sizing-Degree of Compensation-Capacitor losses-Location-Placement-Maintenance.

Suggested Reading: Savings calculation after implementing the above methods

MODULE 4 METERING FOR ENERGY MANAGEMENT(9L)

Relationships between parameters-Units of measure-Typical cost factors- Utility meters - Timing of meter disc for kilowatt measurement - Demand meters - Paralleling of current transformers - Instrument transformer burdens-Multitasking solid-state meters – Metering location vs. requirements

Suggested Reading: Metering techniques and practical examples

MODULE 5 LIGHTING SYSTEMS & COGENERATION(9L)

Concept of lighting systems - The task and the working space -Light sources - Ballasts –Luminaries -

Lighting controls-Optimizing lighting energy - Power factor and effect of harmonics on power quality - Cost analysis techniques-Lighting and energy standards

Cogeneration: Forms of cogeneration - feasibility of cogeneration- Electrical interconnection.

Suggested Reading: Electrical Design of Buildings

COURSE TITLE	**HIGH VOLTAGE DC TRANSMISSION**			**CREDITS**	**3**
COURSE CODE	**EEA3733**	**COURSE CATEGORY**	**DE**	**L-T-P-S**	**3- 0- 0- 1**
CIA	**50%**			**ESE**	**50%**
LEARNING LEVEL	**BTL-4**				

CO	**COURSE OUTCOMES**	**PO**
1	Appraise the need of HVDC technology for bulk power transmission and choose appropriate type of HVDC link and converter.	2,3,4,5,12
2	Analyze the operation of Graetz circuit as rectifier and inverter without and with overlap.	2,3,4,5,12
3	Evaluate the operation and efficacy of different controllers and analyze the different faults in HVDC systems	2,3,4,5,12
4	Discriminate and evaluate the issues related with harmonics, reactive power control and protection of HVDC system.	2,3,4,5,12
5	Recognize and appraise the recent trends in HVDC transmission systems.	2,3,4,5,12

Prerequisites : Power Electronics

MODULE 1 - INTRODUCTION 1 **(9L)**

Introduction to HVDC transmission, Comparison between HVAC and HVDC systems - economic, technical and reliability, limitations, Types of HVDC links - monopolar,

bipolar and homopolar links, Components of HVDC transmission system.

Applications: HVDC transmission

MODULE 2 - ANALYSIS OF HVDC CONVERTERS (9L)

Analysis of HVDC Converters, Rectifier and Inverter operation of Graetz circuit without and with overlap. Output voltage waveforms and DC voltage in both rectifier and inverter operation, Equivalent circuit of HVDC link

Suggested Reading: Basic circuit operation of converter and inverter circuits

MODULE 3 - HVDC SYSTEM CONTROL 3 (9L)

Basic means of HVDC system control, desired features, power reversal, Basic controllers - constant ignition angle, constant current and constant extinction/ advance angle control, power control, high level controllers. Converter mal operations - misfire, arc through, commutation failure

Suggested Reading: Sources of converter mal operations,

MODULE 4 - POWER FLOW ANALYSIS HVDC SYSTEM H4 (9L)

Harmonics in HVDC system - Characteristic and uncharacteristic harmonics - troubles due to harmonics –harmonic filters - active and passive filters - Reactive power control of converters, Protection issues in HVDC, over voltage and over current protection, voltage and current oscillations, DC reactor design, DC Circuit breakers

Suggested Reading: Need for reactive power control

Applications: place of highly inductive loads

MODULE V - RECENT TRENDS IN HVDC TRANSMISSION (9L)

Recent trends in HVDC transmission-CCC based HVDC system, VSC based HVDC system,– Multiterminal HVDC systems and HVDC system applications in wind power generation, Interaction between AC and DC systems

Applications: In renewable energy systems

COURSE TITLE	POWER SYSTEM AUTOMATION			CREDITS	3
COURSE CODE	EEA3734	COURSE CATEGORY	DE	L-T-P-S	3- 0- 0- 0
CIA	50%			ESE	50%
LEARNING LEVEL	BTL-4				

CO	COURSE OUTCOMES	PO
1	To understand the concepts of power system automation.	2,3,4,5
2	To understand the components of SCADA systems.	2,3,4,5
3	To comprehend the RTU, IED and other components of automation systems	2,3,4,5
4	To understand the transfer of signals from the field to an operator control terminal.	2,3,4,5
5	To design an interoperable powers automation system.	2,3,4,5,12

Prerequisites : Basic Knowledge of Transmission & Distribution systems and Measuring Instruments

MODULE 1-INTRODUCTION TO SCADA (9L)

Evolution of Automation systems, History of Power system Automation, Supervisory Control And Data Acquisition(SCADA) Systems, Components of SCADA systems, SCADA Applications, SCADA in power systems, SCADA basic functions, SCADA application functions in Generation, Transmission and Distribution.

Suggested Reading: SCADA based protection system

Applications: Comprehensive operational planning and control, Network security, Economic dispatch

MODULE 2-SCADA SYSTEM COMPONENTS(9L)

Advantages of SCADA in Power Systems, The Power system 'Field', Types of data &signals in the Power system, Flow of Data from the field to the SCADA Control center. Building blocks of SCADA systems, Classification of SCADA systems.

Suggested Reading: Operation and control of interconnected power system

MODULE 3-FEATURES OF RTU (9L)

Remote Terminal Unit (RTU), Evolution of RTUs, Components of RTU, Communication, Logic, Termination and Test/HMI Subsystems, Power supplies, Advanced RTU Functionalities.

Suggested Reading: Microcontroller based RTU for distribution automation system

Applications: RTU for Distribution Automation and Substation Monitoring applications

MODULE 4-COMMUNICATION SYSTEM STANDARDS FOR SCADA (9L)

Intelligent Electronic Devices (IEDs), Evolution of IEDs, IED functional block diagram, The hardware and software architecture of IED, IED Communication subsystem, IED advanced functionalities, Typical IEDs, Data Concentrators and Merging Units, SCADA Communication Systems.

MODULE 5-FEATURES OF HMI (9L)

Master Station, Master station software and hardware configurations, Server systems in the master station, Small, medium and large master station configurations, Global Positioning Systems, Master station performance, Human Machine Interface (HMI), HMI components, Software functionalities, Situational awareness, Case studies in SCADA.

Suggested Reading: SCADA Simulation of a distributed generation system

Applications: Utility applications

LAB / MINI PROJECT/FIELD WORK

Introduction to electrical Supervisory Control & Data Acquisition (eSCADA) using ETAP

COURSE TITLE	**POWER SYSTEM PLANNING AND RELIABILITY**			**CREDITS**	**3**
COURSE CODE	**EEA3735**	**COURSE CATEGORY**	**DE**	**L-T-P-S**	**3- 0- 0- 1**
CIA	**50%**			**ESE**	**50%**
LEARNING LEVEL	**BTL-5**				

CO	**COURSE OUTCOMES**	**PO**
1	Able to analyse and evaluate Planning and forecasting.	2,3,4,5
2	Able to evaluate the reliability in Generation.	2,3,4,5
3	Able to evaluate the reliability in Transmission.	2,3,4,5
4	Able to analyse and evaluate interconnected and Distribution system.	2,3,4,5,12
5	Able to analyse and evaluate expansion Planning.	2,3,4,5,12

Prerequisites : Power system analysis, Power system transmission and distribution, Matrices, Probability andCalculus.

MODULE 1 – PLANNING AND FORECASTING (9L)

Objectives of planning – Long and short term planning - Load forecasting – characteristics of loads – methodology of forecasting – energy forecasting – peak demand forecasting – total forecasting – annual and monthly peak demand forecasting.

Suggested Reading: Use of AI in load forecasting.

Applications: Load forecasting using NN

MODULE2–CONCEPTS OF RELIABILITY AND RELIABILITY IN GENERATION (9L)

Reliability concepts – exponential distributions – meantime to failure – series and parallel system – MARKOV process – recursive technique. Generator system reliability analysis – probability models for generators unit and loads – reliability analysis of isolated and interconnected system – generator system cost analysis.

Suggested Reading: – corporate model – energy transfer and off peak loading.

MODULE 3- TRANSMISSION SYSTEM AND RELIABILITY ANALYSIS (9L)

Transmission system reliability model analysis – average interruption rate - LOLP method - frequency and duration method - Sub transmission lines and distribution substations- -Design primary and secondary systems **Suggested Reading:** Fuzzy load flow probabilistic transmission system reliability analysis.
MODULE 4– INTERCONNECTED SYSTEMS (9L)
Two plant single load system - two plant two load system - load forecasting uncertainty - Interconnections benefits- Introduction to system modes of failure – the loss of load approach – frequency & duration approach. **Suggested Reading:** spare value assessment – multiple bridge equivalents
MODULE 5– EXPANSION PLANNING (9L)
Basic concepts on expansion planning-procedure followed for integrate transmission system planning, current practice in India-Capacitor placer problem in transmission system and radial distributions system **Suggested Reading:** distribution system protection and coordination of protective devices.

CIA	**50%**			**ESE**	**50%**
LEARNING LEVEL	**BTL-4**				

CO	**COURSE OUTCOMES**	**PO**
1	Identify the conditions in conventional power system where the installation of	2,3,4,5,12

	FACTS controllers or Devices becomes vital.	
2	Analyze the performance of a conventional transmission system and apply the principles of reactive power compensation for improvement.	2,3,4,5,12
3	Illustrate the modes of operation of thyristor based and voltage source converter based FACTs controllers and explain the capabilities and modeling aspects.	2,3,4,5,12
4	Analyze different series, shunt or combined series-shunt FACTs controllers and compute the performance when installed in a given transmission system.	2,3,4,5,12
5	Analyze the different modes of operation of UPFC.Comparinf the performance of UPFC with other FACTS controllers	2,3,4,5,12

Prerequisites : Power System Analysis, Power Conversion techniques or equivalent

Module 1 - INTRODUCTION – (9L)

Fundamentals of ac power transmission - transmission problems and needs - emergence of FACTS - FACTS control considerations - FACTS controllers

Suggested Reading: EVHAC lines

Applications: Transmission Line

Module 2 - STATIC VAR COMPENSATOR (SVC) (9L)

Principles of shunt compensation – Variable Impedance type & switching converter type - Static Synchronous Compensator (STATCOM) configuration - characteristics and control

Applications: Improve the performance of transmission Line

Module 3 - THYRISTOR CONTROLLED SERIES CAPACITOR (TCSC) AND APPLICATIONS (9L)

Principles of static series compensation using GCSC, TCSC and TSSC – applications - Static Synchronous Series Compensator (SSSC)

Suggested Reading: Place of adding series compensators in transmission lines

Applications: Series compensators in transmission lines

Module 4 - VOLTAGE SOURCE CONVERTER BASED FACTS CONTROLLERS (9L)

Principles of operation - Steady state model and characteristics of a static voltage regulators and phase shifters - power circuit configurations

Suggested Reading: Need for VSC's

Applications: Transmission Lines

Module 5 - UNIFIED POWER FLOW CONTROLLER (9L)

UPFC - Principles of operation and characteristics - independent active and reactive power flow control- comparison of UPFC with the controlled series compensators and phase shifters

Suggested Reading: UPFC control

Applications: Reactive and Real power compensation in Transmission Lines

COURSE CODE	**EEA3741**	**COURSE CATEGORY**	**OE**	**L-T-P-S**	**3- 0- 0- 1**
CIA	**50%**			**ESE**	**50%**
LEARNING LEVEL	**BTL-5**				

CO	**COURSE OUTCOMES**	**PO**
1	Understand and analyse the fundamental concepts of solar PV systems	2,3,4,5,12
2	Design a solar PV power plants and its components	2,3,4,5,12
3	Understand and analyse the fundamental concepts of fuel cells	2,3,4,5,12

Prerequisites : Nil

MODULE 1 - SOLAR PV SYSTEMS (L12)

Fundamentals of solar cell, semiconductors as basis for solar cells materials and properties, P-N junction, sources of losses and prevention, estimating power and energy demand, site selection, land requirements, choice of modules, economic comparison, balance of systems, off grid systems, grid interface, Supporting structures, mounting and installation, battery storage, power condition unit, selection of cables and balance of systems, planning with software, maintenance and schedule, Monitoring, Data Management, Performance Analysis and Financial Analysis

MODULE 2 - SOLAR PV POWER PLANTS (L12)

Array design, inverter types and characteristics, Power conditioning system: working algorithms, performance analysis; design of standalone, hybrid and grid interactive plants, commissioning of solar PV plant

MODULE 3 - FUEL CELLS (L12)

Thermodynamics of fuel cells; free energy change and cell potentials; effects of temperature and pressure on cell potential; energy conversion efficiency; factors affecting conversion efficiency; polarization losses; important types of fuel cells (hydrogen-oxygen, organic compounds-oxygen, carbon or carbon monoxide-air, nitrogen compounds-air); electrode types; electrolytes for fuel cells; applications.

COURSE TITLE	**WIND AND HYDRO ENERGY SYSTEMS**			**CREDITS**	**3**
COURSE CODE	**EEA3742**	**COURSE CATEGORY**	**OE**	**L-T-P-S**	**3- 0- 0- 1**
CIA	**50%**			**ESE**	**50%**
LEARNING LEVEL	**BTL-4**				

CO	**COURSE OUTCOMES**	**PO**
1	Understand and analyse the fundamental concepts wind energy power generation	2,3,4,5,12
2	Understand and analyse the operation and control of wind energy converter	2,3,4,5,12
3	Understand and analyse the concepts and components of hydro power generation	2,3,4,5,12

Prerequisites : Nil

MODULE 1 - WIND ENERGY (12L)

Basics :Status, Advantages and disadvantages of wind energy systems, Advantages and disadvantages, Types of wind energy converters, local Effects on wind, site selection: roughness length, wind shear, Wind Speed Variability, Obstacles to wind flow,

Working principles of wind energy: Energy content in wind, Energy Conversion at the Blade, Wind variations: Weibull distribution.

MODULE 2 - COMPONENTS , OPERATION AND CONTROL OF A WIND ENERGY CONVERTER (12L)

Components of a wind energy converter: Rotor Blades, Gearboxes, Synchronous or Asynchronous Generators, Towers, Miscellaneous components, Turbine Selection

Operation and Control of Wind Energy Converters: grid requirements, Issue of Noise and Its Control, Power Curve and Capacity Factor, Pitch control, Stall Control, Yaw Control

MODULE 3 - HYDRO POWER (12L)

Hydropower basics: Water Cycle in Nature, Classification of Hydropower Plants, Status of Hydropower Worldwide, Advantages and Disadvantages of Hydropower, Operational Terminology, Legal Requirements

Working principles: Locating a Hydropower Plant, Basics of Fluid Mechanics for hydro power, single and multiple reservoir system, cascaded power plants Important Parts of Hydropower Station: Turbine, Electric Generator, Transformer and Power House, Structural parts: Dam and Spillway, Surge Chambers, Stilling Basins, Penstock and Spiral Casing, Tailrace, Pressure Pipes, Caverns, auxilliary parts. Hydraulic turbines: Classification of Hydraulic Turbines, Theory of Hydro Turbines: Francis, Kaplan, Pelton turbines, efficiency and selection of turbine

COURSE TITLE	**BIOMASS ENERGY SYSTEMS**			**CREDITS**	**3**
COURSE CODE	**EEA3743**	**COURSE CATEGORY**	**OE**	**L-T-P-S**	**3- 0- 0- 1**
CIA	**50%**			**ESE**	**50%**
LEARNING LEVEL	**BTL-4**				

CO	**COURSE OUTCOMES**	**PO**
1	Understand the fundamental concepts of Biomass	1,2,3,4,5,12
2	analyse the operation and control of biomass and biogas	1,2,3,4,5,12
3	Understand and analyse the industrial and power generation aspects of biomass	1,2,3,4,5,12

Prerequisites : Nil
MODULE 1 - BIOMASS RESOURCE (L12)
Characteristics of Biomass fuel, technologies for using biomass, comparison of direct combustion with other technologies
MODULE 2 - BIOMASS GASIFIERS AND INDUSTRIAL USE OF BIOMASS

(L12)	
Biomass Gasifiers: Basics of Gasification and types of Gasifiers, Thermodynamic Analysis Biogas Technology, Sizing/Selection and design of Gasifiers, Industrial use of biomass: Industrial Boilers, biomass as fuel, co-firing and co-generation, Economic analysis, Testing and Performance Evaluation of Gasifiers, Use of biomass for liquid fuel, Biomass policy	
MODULE 3 - BIOGAS	**(L12)**
Types of biogas plants, design and performance analysis, application of biomass

COURSE TITLE	**POWER CONVERTERS AND DRIVES LABORATORY**				**2**
COURSE CODE	**EEA3792**	**COURSE CATEGORY**	**PC**	**L-T-P-S**	**0-0-3-0**
CIA	**60%**		**ESE**	**40%**	
LEARNING LEVEL	**BTL-4**				

CO	**COURSE OUTCOMES**	**PO MAPPING**
1	Analyse the characteristics of various DC with controlled rectifiers and chopper	1,3,4,5,12
2	Analyse the characteristics of various AC with modern power electronics controller	1,3,4,5,12
Prerequisites: -: Basic Power Electronics		
Practical		**(30)**

1. Torque-speed characteristics of a separately excited DC motor drive fed by a two-pulse thyristorrectifier .
2. Torque-speed characteristics of a separately excited DC motor drive fed by a 6- pulse fully controlled rectifier.
3. speed control of 1-phase Induction motors with A.C. voltage controllers.
4. speed torque characteristics of DC shunt motor using DC chopper.
5. speed control of 3-phase Induction motors fed from VSI using v/f strategy.
6. four quadrant operation of DC drives using dual converter circuit.

COURSE TITLE	SEMINAR				2
COURSE CODE	EEA3796	COURSE CATEGORY	PC	L-T-P-S	0-0-3-0
CIA	60%		ESE	40%	
LEARNING LEVEL	BTL-6				

CO	COURSE OUTOMES	PO
1	Able to develop simple electrical and electronic models based on the knowledge gained.	1,3,4,5,12
2	Able to propose a project and defend its advantages.	1,3,4,5,12
3	Able to implement a real time system as proposed.	1,3,4,5,12

Prerequisites: - Basic Electrical and Electronics Engineering subjects.

SEMINAR

Seminar **s**hould be taken on state of the art topic of student's own choice based on relevant specializationapproved by an Department incharge. The student shall submit the duly certified seminar report in standard format, for satisfactory completion of the work by the concerned Guide and head of the department/institute.

COURSE TITLE	MINI PROJECT				2
COURSE CODE	EEA3780	COURSE CATEGORY	PC	L-T-P-S	0-0-3-0
CIA	60%		ESE	40%	
LEARNING LEVEL	BTL-6				

CO	COURSE OUTOMES	PO
1	Able to develop simple electrical and electronic models based on the knowledge gained.	1,3,4,5,12
2	Able to propose a project and defend its advantages.	1,3,4,5,12
3	Able to implement a real time system as proposed.	1,3,4,5,12

Prerequisites: - Basic Electrical and Electronics Engineering subjects.

MINI PROJECT

To carry out a mini project and simple prototype in the area of interest based on the knowledge gained in Electrical and Electronics Engineering from undergraduate and first semester

The students will carry out a project in one of the following Electrical and Electronics Engineering areas but with substantial multidisciplinary components:

- Power Electronics, Control system
- Transmission and Distribution, Power system
- Electrical Machines, Solid State Drives etc. . .

Every individual student will be assigned a faculty to guide them. There will be three major reviews which will be carried out as listed below.

Review #	Requirement	Mark Weightage	
		Internal	External
0	Area / Title selection	-	-
1	Literature review / Proposal for the Project	10%	-
2	Mathematical modelling/Circuit Design	20%	-
3	Final simulation / Hardware presentation	20%	-
End Semester Exam	Final Viva-Voce and project demonstration	-	50%
